

Setup for Controlling your PC

Step1:- Create an account on the PUBNUB website [here](https://dashboard.pubnub.com/login) (<https://dashboard.pubnub.com/login>) and obtain your publisher-subscriber key from your dashboard.

Step2:- Now, clone the GitHub repo in your local laptop or system from this link (https://github.com/abhyamgupta123/COGU_) and follow the instructions given in the Github repo, or from here.

Step3:- Fill all the required info in the keys_data.txt file like your publisher and subscriber key obtained from step1.

Step4:- Now make the file setup_cogu.sh executable by executing command:-
chmod +x setup_cogu.sh.

Step5:- Now run the setup_cogu file by executing command
bash setup_cogu.sh.

NOTE:-

Don't try to run the script as superuser or by using sudo command like *'sudo bash setup_cogu.sh'* only give password when asked otherwise it won't be installed.

Now your COGU desktop configuration will be installed after the execution of
Script.

To remove the COGU from your desktop follow these steps:-

Step1:- Make the goodbye.sh file as executable by executing command

`chmod +x goodbye.sh`

Step2:- Now execute the script by command

`bash goodbye.sh`

Note:-

Only provide password when asked, and don't run or execute any Script with sudo.
